SANTHOSH BURUGUPALLY

Senior SDET | Test Automation & Quality Engineering
Vancouver, BC | +1 (514) 715-3015 | burugupallysanthosh@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Senior SDET with 8+ years of Quality Engineering experience designing and maintaining scalable test automation frameworks for enterprise-grade SaaS platforms. Deep expertise in Playwright, Cypress, and Selenium with TypeScript/JavaScript, driving functional, regression, and performance/load testing across CI/CD pipelines (GitHub Actions, Jenkins). Strong background in automated REST API testing, cloud (AWS) and containerized (Docker) test infrastructure, and applying software design patterns to build maintainable, reusable automation frameworks. Proven track record mentoring engineers, leading code reviews, and championing a quality-first culture, including the use of AI-assisted/GenAI tools to increase test efficiency and coverage.

CORE COMPETENCIES

Automation Frameworks: Playwright, Cypress, Selenium, Postman, REST Assured
Programming & Design: TypeScript, JavaScript, Node.js, Java, Python — Software Design Patterns (Page Object Model, Factory)
CI/CD & DevOps: GitHub Actions, Jenkins, CircleCI, GitLab CI
Cloud & Infrastructure: AWS (EC2, S3, Lambda), Docker, GCP, Microservices & Containerized Applications
Performance & Load Testing: JMeter, Locust
Test Management & Monitoring: Jira, TestRail, Xray, Zephyr, Confluence, Sentry, Loggly
Methodologies: Agile/Scrum, TDD, BDD, AI-Assisted Testing (GenAI)

PROFESSIONAL EXPERIENCE

Senior SDET | Global Relay — Hybrid, Canada **Dec 2025 – Present**

- Design, develop, and maintain scalable, reusable TypeScript test automation frameworks supporting functional, integration, regression, and edge-case coverage across an enterprise-grade SaaS platform.
- Partner with product managers and developers during sprint planning and backlog refinement to define clear, testable acceptance criteria and foster a quality-first mindset throughout the development lifecycle.
- Author and maintain automated REST API test suites, identifying defects and potential release-blocking issues prior to deployment.
- Integrate automated test suites into CI/CD pipelines, ensuring fast, reliable feedback on build quality and release readiness.
- Conduct code reviews of automation scripts and frameworks, mentoring engineers on automation best practices and driving a culture of technical excellence.
- Continuously evaluate and improve automation strategy to increase coverage, reduce execution time, and reduce manual testing effort within CI/CD pipelines.
- Analyze test execution trends and produce quality/release-readiness metrics to guide risk mitigation and go/no-go decisions.

Senior QA Engineer / QA Release Manager | Novisto — Remote, Canada **2023 – Sep 2025**

- Built and maintained Web UI and API test automation frameworks (Cypress, Playwright) in TypeScript/Node.js, reducing manual regression testing effort and expanding coverage across a SaaS platform.
- Developed reusable utilities for RESTful and asynchronous API test automation; integrated suites into GitHub Actions CI/CD pipelines for continuous testing and deployment validation.
- Designed and implemented AWS-based (S3, Lambda, EC2) distributed test execution infrastructure to support scalable, parallel automated testing.
- Executed performance and load testing with JMeter, analyzing API performance and failure trends (Sentry, Loggly) and partnering with DevOps to resolve bottlenecks.
- Designed and executed comprehensive test plans for new features and system enhancements, collaborating cross-functionally with global Agile teams to ensure high-quality releases.
- Mentored junior QA engineers through code review and automation best practices; explored GenAI/AI-assisted tools to accelerate automation script generation and test data creation.

Lead QA Automation Developer | Enphase Energy / Sofdesk — Remote, Canada **Aug 2020 – Jul 2023**

- Designed and implemented end-to-end test automation frameworks using Selenium and TypeScript, integrated with CI/CD pipelines for continuous validation.
- Automated REST API test coverage using Postman, validating endpoints within CI pipelines prior to release.
- Introduced Docker-based containerized test environments, improving QA efficiency and environment consistency.
- Deployed and monitored builds on AWS; coordinated automated regression runs ahead of major releases.
- Partnered with development and operations teams to identify defects early and streamline release processes.
- Supported performance benchmarking to validate scalability of web applications under high load.

Software QA Engineer | SportInsurance — Montreal, Canada **Aug 2019 – Jul 2020**

- Automated and executed functional and regression test suites for web and REST API platforms.
- Developed reusable Postman-based scripts for backend API validation.
- Participated in the transition to TDD, improving code quality and developer collaboration.
- Logged, tracked, and verified defects in Jira, communicating testing status in Agile ceremonies.

Intern Developer | NSIC — India **Jan 2016 – Jan 2017**

- Developed and executed automated regression test cases using Selenium WebDriver; gained hands-on experience with SQL, black-box testing, and test data management.

EDUCATION

Master's in Software Engineering — Concordia University, Montreal, Canada
Bachelor's in Computer Science — Sreenidhi Institute of Science and Technology, Hyderabad, India

CERTIFICATIONS

- AWS Certified Cloud Practitioner (In Progress)
- ISTQB Certified Tester – Foundation Level
- Cypress & Playwright Advanced Automation
